

# Forests, trees and agroforestry for diverse sustainable landscapes

## “ASSESSING THE BENEFITS OF LANDSCAPE RESTORATION”

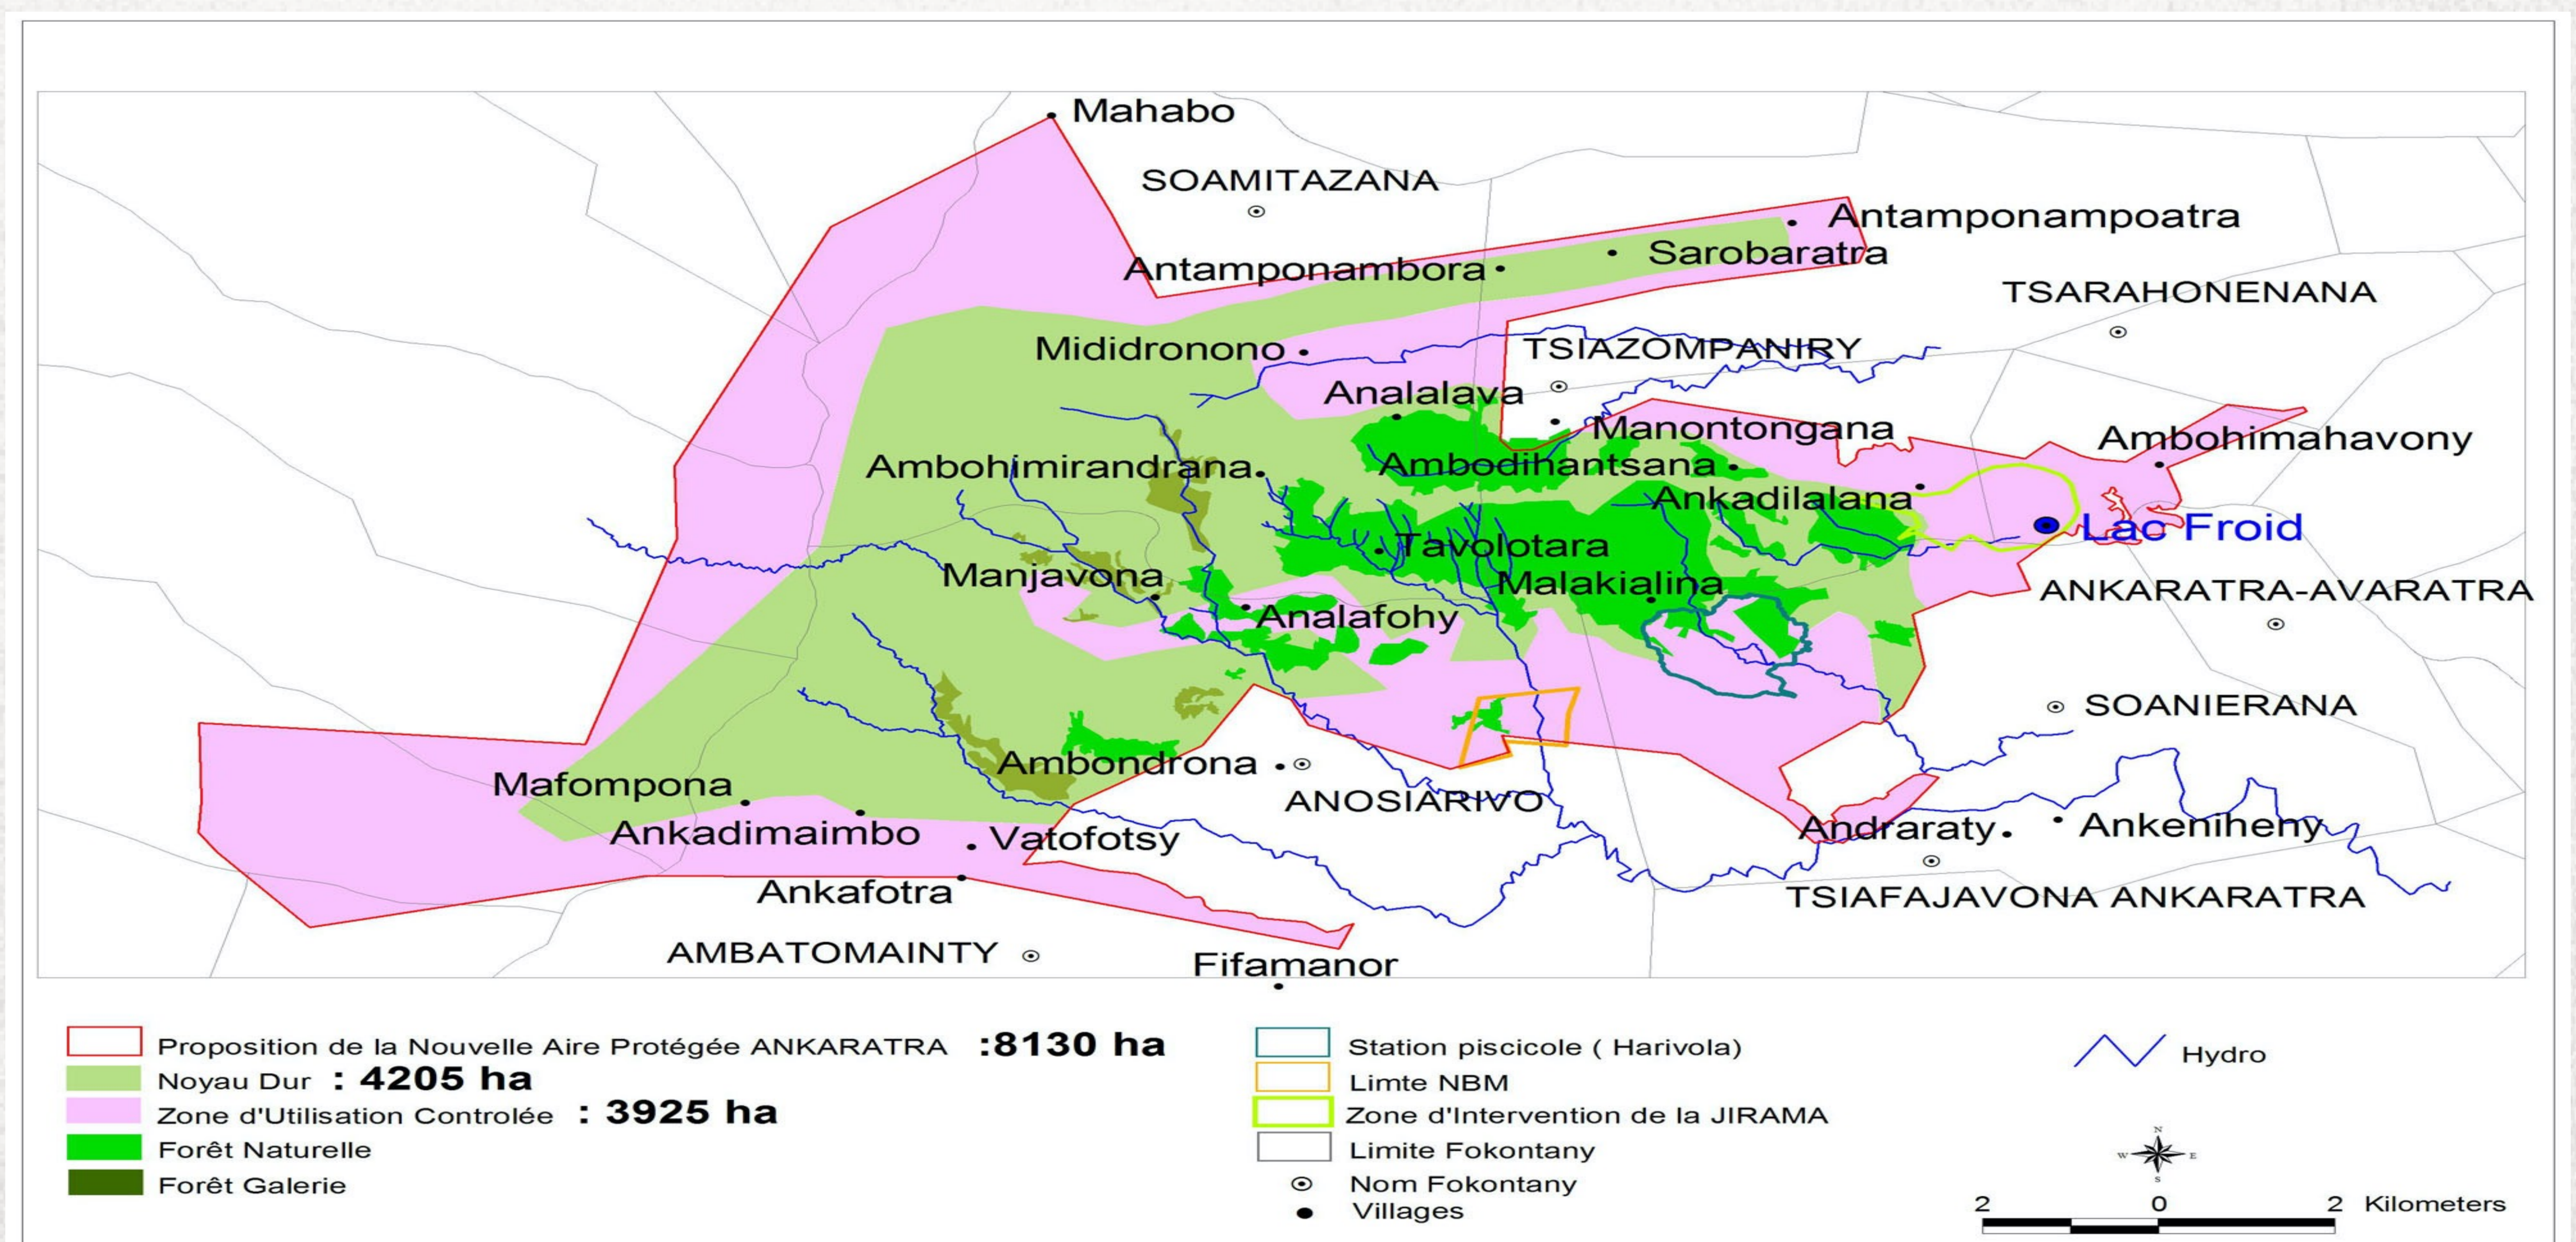

**Jean Yves Richet RAZAFINDRAKOTO** PROSPERER IFAD PROGRAM Bamboo VC technical manager, Antananarivo, Madagascar  
**Ravaka Koloina RABARIARIVELO** PhD trainee, female, Master in economic geography, Public University of Madagascar, Ankatso, Antananarivo  
**Njaka RAJAONARISON** INBAR Madagascar project coordinator, INBAR, Antananarivo, Madagascar

### Preservation of biodiversity and development of livelihoods of village communities around the protected site

Focus on directly improving the living conditions of the rural poor and the environment-projects that include community forestry, social forestry, conservation of natural forests for the environment locally and projects agroforestry that promote food security and autonomy. Given this orientation, which causes a change in the interaction between the forest sector and other sectors. Develop new strategies and approaches for the analysis of forestry project impact

### Project Location (Country, State/Province/City) and provide a map of the sub grant project site

Madagascar, Antananarivo Province / Vakinankaratra Region/ District Ambatolampy District / Ankaratra forest/ Tsiafajavona Manjakatempo Town, forest station Manjakatempo The forest station is located on the eastern slopes of the mountain Ankaratra between about 19 ° 19 'and 24 'South latitude and 47 ° 14' and 22 'East longitude (Report No. 6 of Deutsche Forstservice GmbH / GTZ by Y.Pieper and R. Lennertz, May 1994). The relief derived vulnerabilities and altitude between 1,650m to "Plain" and 2,643 m at its highest point, which is the Tsiafajavona, is very rugged and is characterized by very steep slopes and numerous rocky outcrops.

### Specific objectives

- Develop a landscape approach taking into account the existence of the protected site
- Identify and implement livelihood for villagers
- The empowerment of the population in the management of renewable natural resources and biodiversity
- Sustainable management of natural resources at the local level
- Protection of endangered species that are classified in the IUCN red list

### Key findings and results

The preservation of biodiversity through education of the population. MNP (Madagascar National Parks) and ONE (Office Nationale pour l'Environnement) have already worked on the general preservation of environment. It should, however, also direct that work on the promotion of certain sectors, ecotourism, local and regional fairs, setting up website valuing protected websites, organizing open house highlighting the enhancement of sites is valuable for the beneficiaries of the project. Participative andragogic approach and special care for vulnerable people as youth and women through adapted sources of revenues
