### Drawing the blueprints for a sustainable agroecological transition

The world is in need of significant transformations towards more nutritious, biodiversity friendly, environmentally sustainable and socially inclusive food systems. Agroecology – a science, a set of practices and a cultural movement that blends principles of ecology and farming – is increasingly being indicated as one of the most promising pathways for the future of global food systems and is currently high on the international agenda.

However, *agroecological transitions* require significant shifts in the enabling policy environments; they require bold strategies, policies and programs. For a country that seeks to engage in an agroecological transition, the issue of the correct context-specific policies is critical.

**The Transformative Partnership Platform (TPP) on Agroecology and its partners are pleased to invite you to a virtual event on 15 July to discuss policies for transitions to agroecological food systems.**

After introducing the TPP and outlining the essential role that policy plays in accomplishing the TPP's mission, the presenters will unveil the latest draft of **"Agroecologically-conducive policies: A review of recent advances and remaining challenges"** for discussion. The feedback collected during the discussion will be integrated into the document before final publication.

By examining country case studies and current scientific evidence, the event will then highlight the opportunities and challenges involved in scaling-up agroecology over the next decade. Such knowledge will help set research, policy and investment priorities for actors at all levels.

A panel discussion and an interactive Q&A session with the audience will complement the event.

Join us on 15 July to reimagine agricultural policies that benefit people and the planet!

#### About the TPP

The **TPP on Agroecology** is a community of scientists, practitioners and policy makers working to accelerate agroecological transitions. Since its **official launch** on 3 June, 2021, the TPP has begun addressing knowledge gaps across **eight domains** that will support various institutions and advocacy groups in key decision-making processes.

**Become a part of the TPP's growing community of practice on GLFx where you can share your insights, knowledge and experiences**

Read the Executive Summary of the document here

The event is organized by the TPP with the participation of CIRAD, The CGIAR Research programs on Forests, Trees and Agroforestry (FTA) and on Policies, Institutions, and Markets (PIM), CIFOR-ICRAF, IFPRI, The Alliance of Bioversity and CIAT, Biovision and the national partners of the partnership platforms PP-AL, GovInn, Malica, Isa and Spad.
